dudduswathi16@gmail.com

SV Nagar, chakripuram- Hyderabad

Summary

Motivated engineering graduate with hands-on academic and project experience in software development concepts and system design. Worked on projects involving email sentiment analysis, cache management optimization, and responsive web UI design, gaining practical exposure to real-world problem solving. Presented a seminar on a hybrid page replacement algorithm focused on improving system performance using predictive approaches.

Demonstrates strong logical thinking, basic programming skills, and an understanding of system workflows through academic learning and project work. Known for being quick to learn, detail-oriented, and adaptable, with a positive attitude toward continuous skill development and collaboration in team-based environments.

Projects

Analysing the Sentiment in Email Conversations by Deep Learning

- Developed an Email Thread Sentiment Analysis system using the Enron Email Dataset and achieved 100% accuracy with Random Forest on VADERSent.
- Implemented and evaluated multiple ML models (Random Forest, Logistic Regression, KNN) with sentiment analyzers (VADERSent, TextBlob, SWN) for effective sentiment classification.

NetFlix Clone

- Developed a responsive Netflix clone homepage using HTML and CSS, replicating the navbar, hero section, and banner with a mobile-first design approach.
- Applied custom fonts, a Netflix-themed color palette, and CSS best practices to achieve a polished, professional UI.
- Strengthened frontend development skills through real-time project work, focused on layout structuring and clean design principles.

A Novel hybrid Page Replacement Algorithm

- Presented a seminar on “A Novel Hybrid Page Replacement Algorithm” focusing on optimizing cache management strategies using time series analysis and forecasting.
- Utilized technologies such as Python, MATLAB, TensorFlow, Keras, and R Programming to analyze and enhance FIFO, LRU, and LFU cache policies for improved system performance.
- Collaborated with a team to design and evaluate hybrid page replacement models that improved throughput and scalability through predictive analytics.

Technical Skills

Python, C Programming, HTML, CSS

SQL, Operating systems, OOPS

Cloud computing: AWS

Certifications

- AWS- Cloud Computing

Creating a static website-Created and configured an S3 bucket ,Implemented versioning and lifecycle policies, Set up cross-region replication

- InternPe- AI/ML
- HackerRank - SQL (Basic and Intermediate certificates)

Education

Sreenidhi Institute of science and technology- BTech (CSE)

(2021 – 2025)
